

# Technology Enhanced Learning Environments for Social Literacy (TEL4SL)

Project nr. 2014-1-PT01-KA200-001025

Coordinator: Luso-Illyrian Institute for Human Development (iLIDH),  
Portugal

Intellectual Output nr. 3

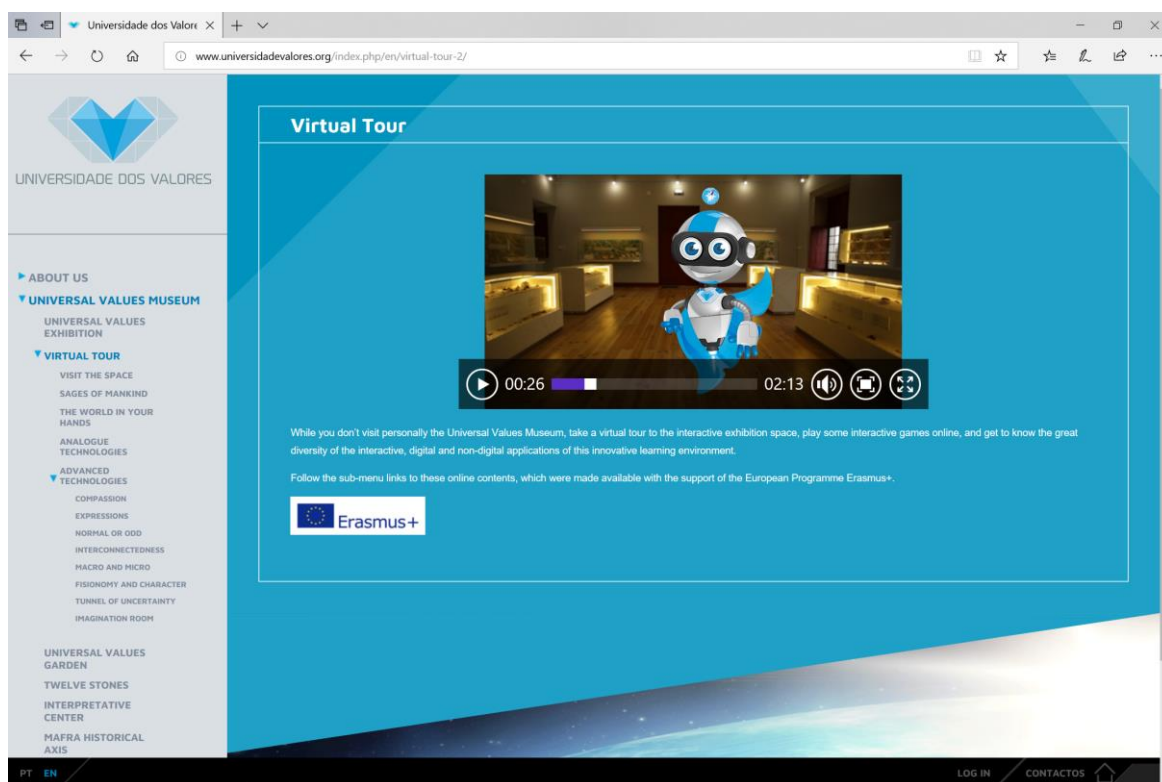

## Multimedia Contents at the Universal Values Museum

One of the core outputs of the TEL4SL project was the development of multimedia content that enables transversal skills – personal, social and civic competences rooted in universal values that transcend culture, religion and ideology – which was delivered and tested within various interactive modules – digital and analogue games and activities – at the project experimental location, the Universal Values Museum (UVM). They were object of a pilot test, which is also reported in IO4, and the images below refer to the beneficiaries using the UVM learning spaces.

Since many of the interactive and learning experiences of TEL4SL are dependant of the physical interactivity with equipment at the UVM spaces, for those unable to visit personally the Universal Values Museum, the promoters made available a Virtual Tour to the interactive exhibition space, enabling the internet users to play some interactive games online and get to know the diversity of the interactive, digital and non-digital applications of this innovative learning environment.

Therefore, this document serves as a link to the visualization and description of these contents in an online visit at
